

John Lewis of Hungerford

HOME OF GREAT DESIGN

ENVIRONMENTAL POLICY STATEMENT

At John Lewis of Hungerford, we take pride in creating timeless kitchens that combine thoughtful design, enduring craftsmanship, and a strong commitment to sustainability. For us, environmental responsibility is not an afterthought, it is woven into every decision, from the first design to the final delivery.

We believe that beautiful design should be matched by a respect for the world around us. That is why we work with materials that are durable, responsibly sourced, and with as light an environmental impact as possible.

We are proud to use Finsa Hidrófugo Moisture Resistant MDF, which is PEFC-certified, CARB2-compliant, and manufactured to meet the highest environmental and health standards, including low-emission formaldehyde ratings (E1) and recycled content, all supported by Environmental Product Declarations and ISO-certified processes.

Our commitment extends well beyond materials. We design products to last, reducing the need for replacements and helping to minimise waste. Where technology allows, we integrate lower-energy solutions such as LED lighting and reduce our reliance on landfill wherever possible.

As a business, we hold ourselves to a high standard and we expect the same of our partners. Our policy is to:

- Continually review and improve how materials are sourced and used throughout our process
- Minimise pollution and aim for low-impact, clean manufacturing practices
- Follow a responsible waste hierarchy: reduce, re-use, recycle
- Choose energy-efficient technologies and systems wherever possible
- Promote environmental awareness among our teams, clients and supply chain
- Encourage environmentally sound transport and delivery practices
- Guide our customers to make choices that are as sustainable as they are beautiful
- Work only with suppliers and contractors who share our environmental standards and commitments
